PROFILE

Computer Science undergraduate (GPA: 8.56) with a first-principles approach to building high-performance, reliable backend systems and frameworks. Enthusiastic about functional programming paradigms for concise expression of complex business logic. Experienced in payment gateway integration, low-code automation platforms, and scalable distributed systems. Eager to contribute to mission-critical payment infrastructure and next-generation SDK/framework development.

EDUCATION

B.Tech in Computer Science and Engineering	2024 – 2028
Bundelkhand Institute of Engineering and Technology, Jhansi	
GPA: 8.56	
Intermediate (ICSE) – St. Angeloes College, Lucknow	2023
Percentage: 89.25%	

SKILLS

Languages: Java, Python, JavaScript, C
Core: Functional Programming, OOP, DSA, System Design, Distributed Systems, RESTful APIs, Caching, Kafka, PubSub
Backend: Node.js, Express.js, FastAPI, WebSockets, Microservices, JWT Auth, API Integrations
Payments & Integrations: Juspay Payments Gateway, Payment Flow Design, Merchant Onboarding
Low-Code & AI: n8n Workflow Automation, LLM Pipelines, Prompt Engineering, Self-Service Application Design
Frontend & SDK: React, Tailwind CSS, UI/UX for Frictionless Experiences
Infra & Cloud: AWS (EC2, S3), Docker, Kubernetes (Basics), Redis, PostgreSQL, MongoDB, Git, Linux

EXPERIENCE

Software Development (Freelance / Collaboration)

- Built and deployed a full-stack **food delivery platform** for a restaurant; reduced infrastructure costs by **70%** through optimized cloud hosting and backend architecture decisions.
- Integrated **Juspay Payments Gateway** to enable seamless online order payments – handling API integration, authentication flows, and reliable end-to-end transaction processing with zero downtime.
- Designed the merchant-side order management interface with self-service controls, enabling the restaurant owner to manage menu, orders, and payment configurations independently.

PROJECTS

AI Resume Generation Workflow – Low-Code Automation Pipeline

- Built an end-to-end **low-code, no-code automation framework** using n8n and LLMs, enabling self-service resume generation with modular stages for parsing, prompt engineering, and LaTeX-based structured output.
- Framework-first, composable architecture directly parallels Juspay’s vision of streamlining and accelerating application development within a platform.

tChat24 – High-Reliability Real-Time Communication System

[Live Demo](#)

- Engineered a **low-latency, high-reliability** real-time system using WebSockets; solved throughput bottlenecks via intelligent client-side filtering – analogous to traffic routing and self-healing system design.
- Built modular distributed backend services from first principles, with clear separation of concerns for reliability at scale.

Blogify – Secure, Scalable Server-Side Platform

[Live Demo](#)

- Implemented **JWT-based authentication & authorization** with encrypted passwords and secure cookie handling – directly applicable to Juspay’s seamless authentication and fraud reduction stack.
- Integrated **AWS S3 SDK** and Cloudinary with streaming uploads, ensuring reliable and high-performance cloud asset handling.

CERTIFICATIONS

CS50: Introduction to Computer Science – Harvard University (edX)	2024
Certificate Link	
Cybersecurity Job Simulation – Forage	2025
Certificate Link	
Cloud Computing Training – NullClass	2025
Certificate Link	

ACHIEVEMENTS

- Demonstrated leadership, critical thinking, and team coordination as **School Captain** – skills central to Day0 mission-critical engineering environments at Juspay.
- Maintaining strong academic performance (GPA: 8.56) while building production-grade payment systems and distributed applications.
